

Welcome to Whitehill's Science week. To get creative at home I have given some examples of kitchen Science homework for you to try with your parents. You must ask for parent or carers' help with this. Take a photo of this to create a Science week

display in school.

Here are some ideas for Science Week:

Transform egg white and make meringue.

Find out all about baking powder by making some pancakes.

Explore changes of state with peppermint creams.

Make a pizza and learn about respiration or make some bread.

Try some colour mixing with jelly.

Make a baked Alaska and find out how you can apply heat and still have cold ice cream.

Make some yummy honeycomb and discover why it has holes.

Get the kitchen scales out and try some weighing and measuring.

Melt some chocolate to discover melting.

Mix coca cola with some mentos in a plastic bottle to make a chemical change rocket (Warning- do this outside with a parent).

Here is a link to help you with ideas-
